FOREWORD

The 21st century has seen major epidemics and pandemics caused by infectious disease like coronaviruses, influenza, and most recently, monkey pox. Infectious disease spread within the human population can be conceptualized as a complex system composed of individuals that interact and transmit viruses via spatiotemporal processes that manifest across and between scales. The complexity of this system ultimately means that infectious disease spread is difficult to understand, predict, and effectively respond to. As spatial data becomes increasingly available at high spatial and temporal resolutions and computing resources can more efficiently handle such data, there have been opportunities for new data science and simulation-based solutions towards improved public health.

The 5th ACM SIGSPATIAL International Workshop on Spatial Computing for Epidemiology (SpatialEpi'24) focuses on all aspects of data science and simulation to better understand the spatial processes and patterns of epidemic diseases, to predict disease outcomes, and develop tools that support and guide policy interventions. It is becoming increasingly clear that interdisciplinary collaboration is needed to foster innovation and progress in these areas. Thus, this workshop is a forum to bring together researchers in the SIGSPATIAL community as well as researchers in epidemiology to discuss new methodologies and frameworks that are truly interdisciplinary. This year we received five submissions, of which we selected three papers including two full paper and one short paper for final publication. The accepted papers cover a range of topics for better understanding the spread of epidemics, including:

- Evaluating the Impact of Shape and Metric Selection on Human Perception in Geospatial Data Visualizations
- Comparing Associations of Chronic Health Outcomes with Social Determinants of Health Indices Using Machine Learning
- CyberGIS-Vis for Democratizing Access to Scalable Spatiotemporal Geovisual Analytics: A Case Study of COVID-19

SpatialEpi'24 will feature a keynote talk by Dr. Ben Lopman, Department of Epidemiology, Rollins School of Public Health, Emory University.

Joon-Seok Kim, Emory University, GA, USA

Taylor Anderson, George Mason University, VA, USA

Max Lau, Emory University, GA, USA

Amira Roess, George Mason University, VA, USA

Andreas Züfle, Emory University, GA, USA

ACKNOWLEDGEMENTS

We extend our gratitude to the program committee for their vital efforts in reviewing submissions, ensuring the quality of the accepted papers. Additionally, we thank our keynote speaker, Ben Lopman, for graciously accepting our invitation and for sharing their research at SpatialEpi 2024.

ORGANIZERS

General Chairs:

Joon-Seok Kim, Emory University, GA, USA

Taylor Anderson, George Mason University, VA, USA

Program Committee Chairs:

Max Lau, Emory University, GA, USA

Amira Roess, George Mason University, VA, USA

Andreas Züfle, Emory University, GA, USA

Program Committee:

Song	Gao	University of Wisconsin-Madison
Alexander	Hohl	University of Utah
Hamdi	Kavak	George Mason University
Zipei	Fan	The University of Tokyo
Ignacio	Segovia-Dominguez	West Virginia University
Jia	Yu	Washington State University
Su	Han	Texas State University

Web Chair:

Hossein **Amiri** Emory University
